1 SCOPE ................................................................. 1
   1.1 Purpose ......................................................... 1
   1.2 Categorization .................................................. 2
      1.2.1 Complexity or Producibility Level .................. 2
   1.3 Classification of Products .................................... 3
      1.3.1 Performance Classes .................................... 3
   1.4 Applicable Documents .......................................... 3
      1.4.1 Reference Documents .................................... 3

2 TECHNOLOGY OVERVIEW ........................................ 4
   2.1 Optoelectronics in Optical Communication Systems .......... 5
   2.2 History of Optoelectronic Packaging .......................... 5
   2.3 Optoelectronic Modules ....................................... 6
   2.4 Packaging and Hermeticity .................................... 7
      2.4.1 Hermetic Packaging ....................................... 7
      2.4.2 Nonhermetic Packaging ................................... 8
   2.5 Theory of Optical Fiber ....................................... 8
      2.5.1 Multimode Fiber ........................................... 9
      2.5.2 Single-Mode Fiber ........................................ 10
   2.6 Automation Requirements ..................................... 11
      2.6.1 Fiber Manufacturing ...................................... 12
      2.6.2 Component Manufacturing ................................ 12
      2.6.3 Connectorization ......................................... 14
      2.6.4 Optical Testing .......................................... 14
      2.6.5 Fusion Splicing, Other Optical Coupling Techniques .... 15
      2.6.6 Fiber Handling ........................................... 16
      2.6.7 Buffer Jacket Damage .................................... 16
      2.6.8 Bend Radius .............................................. 16
      2.6.9 Fiber Ends ................................................ 16
      2.6.10 Summary ................................................. 16

3 APPLICATIONS OF OPTOELECTRONIC PRODUCTS ............... 17
   3.1 Consumer Products (Previously Low Cost) ................... 17
      3.1.1 Component Characteristics ............................... 18
      3.1.2 Board Assembly Issues ................................... 18
   3.2 High Performance (Office and Large Business Systems) ....... 19
      3.2.1 Component Characteristics ................................ 20
      3.2.2 Board Assembly Issues ................................... 20
   3.3 Portable Products ............................................. 20
   3.4 Harsh Environments ........................................... 20

4 DESIGN CONSIDERATIONS ......................................... 21
   4.1 Level 1 Design Consideration ................................ 21
      4.1.1 Optical Design ............................................ 21
      4.1.2 Coupling Between Lensed Fiber and Laser Waveguide ... 22
      4.1.3 Passive Alignment ......................................... 24
      4.1.4 Active Alignment ......................................... 24
      4.1.5 Optical Microsubmounts ................................... 24
      4.1.6 Alignment Technology ..................................... 25
      4.1.7 Design/Process for Rework ................................ 28
      4.1.8 Single Fiber ............................................... 30
      4.1.9 Fiber Ribbon Cable ........................................ 30
      4.1.10 Axis Change Coupling of Multifiber .................... 31
      4.1.11 Multifiber Termination Using Cost-Efficient Plastic Parts, Suitable for MT-Connector ........... 31
      4.1.12 Package Interconnection ................................ 31
      4.1.13 Package Interconnect .................................... 32
      4.2 Level 1 Components ......................................... 34
      4.2.1 Component Housings ....................................... 35
      4.2.2 Mechanical and Environmental Protection ............... 36
      4.2.3 Heat Transfer from the Component to the Outside of Component Housing ............................. 36
      4.2.4 Optical Train Stability ................................... 36
      4.2.5 Electrical Feedthrough Component Housing ............. 36

6.2.5 Wire Bonding Material ......................... 83
6.3 Substrate Material ................................. 83
6.3.1 Substrates for Optical Systems ............. 83
6.3.2 Copper Clad Laminate (Rigid) ............... 84
6.3.3 Flexible Material (Clad and Unclad) ....... 85
6.4 Heat Transfer Materials ......................... 87
6.4.1 Filled Polymers .................................. 87
6.4.2 Composites ......................................... 87
6.4.3 Thermally Conductive Grease ............... 87
6.4.4 Diamond Thin Film ............................. 87
6.5 Housing Materials ................................. 87
6.5.1 Iron/Cobalt/Nickel Alloys (Kovar) .......... 87
6.5.2 Iron/Nickel (Alloy 42) Laminated Multilayer Ceramic ................. 87

7 ASSEMBLY PROCESSES ............................... 88
7.1 Assembly Process Overview .................... 88
7.1.1 Land Finishes - Lid Sealing ................. 88
7.2 Die and Component Bonding .................. 88
7.2.1 Metallurgical Die Attach and Bonding .... 89
7.2.2 Polymer Adhesive Die Attach and Bonding .... 90
7.2.3 Inorganic Glass-Based Die Attach and Bonding .......... 91
7.3 Electrical Connection to Components ........ 91
7.3.1 Wire Bonding for Electronic Interconnect .... 92
7.3.2 Flip Chip Attach Process of Active and Passive Devices ................. 94
7.3.3 Flip Chip for Optoelectronic Assembly .... 94
7.3.4 Forms of Flip Chip Contacts ................. 96
7.4 Encapsulation ......................................... 96
7.4.1 Wire Bonded Devices ......................... 96
7.5 Fiber Sealing in a Hermetic Assembly ...... 97

7.6 Substrate Preparation for Level 1 and Level 2 ............................................ 98
7.7 Optical Fiber Splicing (Mechanical/Fusion) .... 99
7.7.1 General Optical Fiber Splicing Process Flow ............................................ 99
7.7.2 Stripping ............................................. 99
7.7.3 Fiber Cleaning ...................................... 101
7.7.4 Fiber Cleaving ..................................... 101
7.7.5 Mechanical Splicing ............................... 101
7.7.6 Fusion Splicing ...................................... 103
7.7.7 Loss Estimation/Measurement ............... 105
7.7.8 Splice Protection ......................... 106
7.7.9 Automation ......................................... 108
7.8 Electrical Attachment ......................... 108
7.9 Fiber Termination ......................... 109
7.9.1 Fiber Cutting ....................................... 109
7.9.2 Fiber Ferrule Attach ......................... 109
7.9.3 Fiber Connectorization ....................... 109
7.9.4 Fiber End Shaping ......................... 109
7.10 Fiber Management ......................... 109
7.11 Mechanical Assembly ....................... 110
7.12 In-Circuit and Functional Test ............ 110
7.13 HAST Test .............................................. 110
7.14 Modification and Rework ..................... 111
7.14.1 Level 1 Repairs ................................ 111
7.14.2 Tape Automation Bond Repairs ............. 111
7.14.3 Adhesive Conditioning ...................... 112

8 TESTING TECHNIQUES ............................... 112
8.1 Insertion Loss Measurement ................. 113
8.2 Splice Loss Measurement Via OTDR ...... 113
8.2.1 Operating Principles of OTDR .......... 113
8.2.2 Negative Losses ............................... 115
8.2.3 Directional Dependence of OTDR Measurement ............................................ 115
8.2.4 Calculation of True Splice Loss ........ 115
8.3 Splice Loss Measurement Via Power Source and Meter ....................... 115

1 SCOPE
This document addresses the implementation of optical and optoelectronic packaging technologies.

The areas discussed include: technology choices, design considerations, material properties, component mounting and interconnecting structures, assembly processes, testing, application, rework, and reliability of completed optoelectronic products. Optoelectronic packaging technologies include active and passive components and discrete fiber cable, their characteristics, and the manner that these parts will become an integral part of the functioning module, board or subassembly.

1.1 Purpose This document is intended to provide general information on implementing optical and optoelectronic packaging technologies, for creating component mounting structures and assemblies that may be exclusively optically oriented or that are to perform a combination of optical and electronic functions.

1.2 Categorization Optoelectronic components are categorized by function (i.e., modulators, lasers, switches, detectors); optoelectronic assemblies are categorized by higher level functions (i.e., transmitters, receivers, amplifiers, transponders). See Figures 1-1 through 1-3.

There are four levels of optoelectronic packaging. These levels have been established to mirror previous packaging levels assigned to electronic equipment. They are intended to make a clear demarcation between manufacturing products intended for the optoelectronic market. The four levels are:

- **OPTO Level 0**: Uncased device (e.g., lenses, Isolator, laser diode, waveguide beam splitters, etc.)
- **OPTO Level 1**: Single device or multiple devices in a package (Multi-Device Subassembly (MDS) - a package integrating optical, optoelectronic components and IC components)
- **OPTO Level 2**: Modules and product boards (Transponder on a daughter card)
- **OPTO Level 3**: Mother board with product boards or cabling (Transponder mounted on a mother board)

It should be recognized that there are also levels of complexity included in each of the levels of optoelectronic packages. Level 0 complexity deals with unpackaged devices complexity primarily relating to the complexity or difficulty in the manufacturing process.

Levels 1 through 3 complexities relate to the assembly process(s) necessary to produce a quality optoelectronic
